

Congresswoman Janice Hahn visits Hi-Shear Technology for CMTC Roundtable Meeting

February 21, 2012

California Manufacturing Technology Consulting (CMTC) held a roundtable meeting at Hi-Shear Technology. Participants included several local manufacturing small businesses as well as Congresswoman Janice Hahn and her staff. This roundtable event fostered information exchange, discussions pertaining to regional challenges, and encouraged local partnerships such as outsourcing to local small businesses.

Hi-Shear was a good choice for a host venue since it is a bright spot in a struggling economy and declining U.S. Aerospace industrial base. Although the reduced budgets for spending have impacted business, Hi-Shear has been making investments in people and resources to fuel its growth. The event concluded with the Congresswoman and members of CMTC touring the Hi-Shear Technology facility, walking from manufacturing to assembly.
