Career Technologies Received AS9100C Recertification

Northridge, CA, March 6, 2015 - Career Technologies announces it has been recertified to the AS9100C and ISO9001 quality management system standards. The certification is the result of Career Technologies passing stringent audit requirements and evaluations of its manufacturing and quality processes.

With the recertification Career Technologies is better equipped to serve the aviation, space and defense industries with a quality management system that has been accepted by the aerospace industry and that ensures compliance with risk management throughout the supply chain.

Designed to meet the stringent and complex demands of the international aerospace industry, AS9100C is the highest certification in the sector and Revision C is the latest version of the standard with which all suppliers must comply in order to ensure a listing on the OASIS (online aerospace supplier information system) database. Revision C changes include greater focus on planning and project management, additional emphasis on risk management and mitigation, and the need to develop plans for continuous improvement of customer satisfaction.

In addition to AS9100C, Career Technologies is ITAR registered.
